Step 1: Left click on network connection icon located in the bottom right-hand corner. Select “Open Network and Sharing Center.”

Step 2: Select “Manage wireless networks.”
Step 3: You are looking for Evergreen. If Evergreen is already there, then go to Step 7. If it isn’t there, then you need to add Evergreen by selecting “Add.”

Step 4: Now Select “Manually create a network profile.”
Step 5: Fill in the required fields as shown above. The network name is Evergreen, the Security type is WPA2-Enterprise, and the Encryption type is AES. You can leave the Security Key blank. Before clicking next, check the box to the left of “Start this connection automatically.” Then click “Next.”

Step 6: This should successfully add Evergreen to your Networks. Now close this window.
Step 7: Left click on “Evergreen” in order to select the Network. Next, right click “Evergreen” and select “Properties.”

Step 8: Click the “Security” tab at the top, and then choose “Settings.”
Step 9: Next, select “Configure.”

Step 10: Uncheck the box next to “Automatically use my windows logon name and password…” Then Click “OK.” Then select “Ok” again.
Step 11: Click “Ok” one more time.

Step 12: Now go back to the connection icon. Select Evergreen and click “Connect.”
Step 13: Select “Connect” again.

Step 14: Enter your SU credentials, and then select “OK.”

Step 16: Select “Connect.”
Step 17: It should say “Connecting to Evergreen…” Please be patient while it connects.

Step 18: You are now successfully connected to Evergreen!
